

■ ABOUT BR-AG

We are a Partner for Regulators, Central Banks and Financial Institutions, supporting them in shaping a unified understanding of data, data flows and data interoperability.

We have successfully completed over 70 projects spanning across 6 continents in the financial and regulatory data landscapes, including digitization and data standardization projects in Europe, Africa, South America and Asia.

With innovation at heart, we engage in projects that bridge together data and innovation, such as the European Financial Transparency Gateway, G20 Techsprint and GFIN Cross-Border Testing.

Joining together our expertise in regulatory data and technology, we have developed our suite of agile data platforms, ATOME Matter and ATOME Particles.

■ OUR SUPPORT

Our Advisory

- Consultancy, design and development
- Data standardisation
- Taxonomies and data models
- Data exchange standards (XBRL, ISO2022, SDMX)
- IT systems
- Design workshops (SupTech roadmaps)

Our Solutions

ΔTOME **Matter**

- Foster unified data understanding by mapping complex legal requirements into clear data concepts.
- Collaborate, review and edit data concepts across various regulatory teams.
- Define unified data dictionaries, reporting forms, templates and validation rules, exchange comments and collaborate on a model or data classification.

ΔTOME **Particles**

- Create, validate, import and export reports.
- Test data models created on the ATOME Matter platform against validation rules.
- Generate reports for testing in data collection processes.
- Validate reports collected from financial institutions.

OUR PROJECTS

EU regulatory bodies

European Central Bank, European Markets and Securities Authority, European Insurance and Occupational Pensions Authority, Single Resolution Board

National authorities

Central banks, financial supervision commissions in Europe, Asia, Africa, South America, Australia

Financial sector initiatives
